BLAST IT

Sandblasting is the best way to prep a metal surface in need of restoration. It removes dirt, grime, rust, corrosion.

PREP IT

Prepping consists of applying a metal prep chemical solution to neutralize surface impurities, cleaning off any lingering debris and prevent rust and corrosion.

POWDER IT

There are many colors and brands of powder to choose from depending on the needs of the customer and the end use of the project.

CURE IT

The cure times for metal can range depending on how long it takes the oven to get to temp and the size of the oven. Typically degrees range from 250(low cure) to 400.
