

TYPES OF

Powder Applications

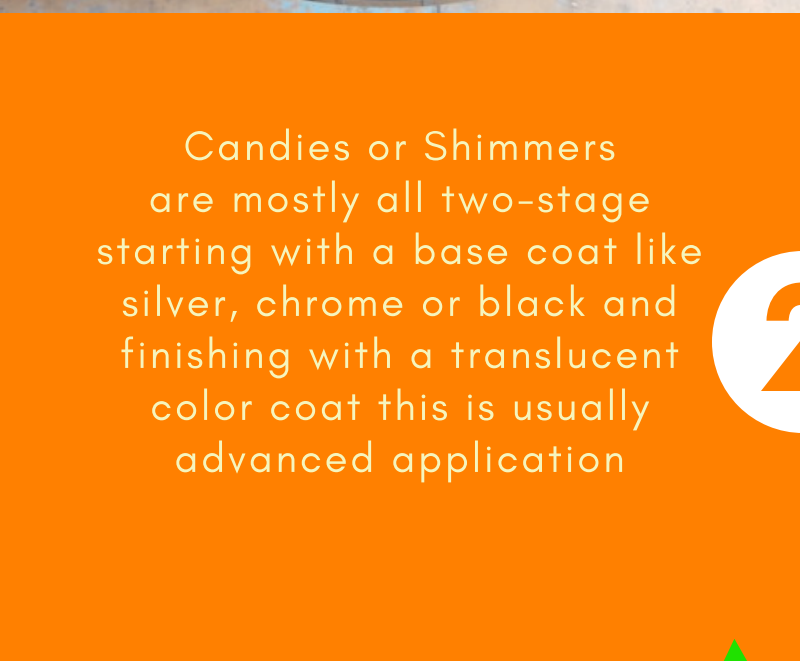

Part 2

types of powders and their uses for desired effects in powder coating

1

Primers as they sound are great for filling and hiding imperfections or as corrosive inhibitors

Candies or Shimmers are mostly all two-stage starting with a base coat like silver, chrome or black and finishing with a translucent color coat this is usually advanced application

2

Clear coat stage

3

Dormant Colors are deep based colors that are applied in the first stage of coating but the color is not revealed until a clear coat is applied in the final stage

Transluents come in many colors and offer the benefits of both deep colored dormant and translucent candies although less shimmery

4

5

Metallics have varying levels of particulates for dazzle and shimmer there are single and two-stage applications
