

TYPES OF

Powder Applications

Part 4

types of powders and their uses for desired effects in powder coating

1

Anodized powders are popular for architectural projects they are mostly characterized as being dark black or brown or bronze some may even have metallic or golden sheens

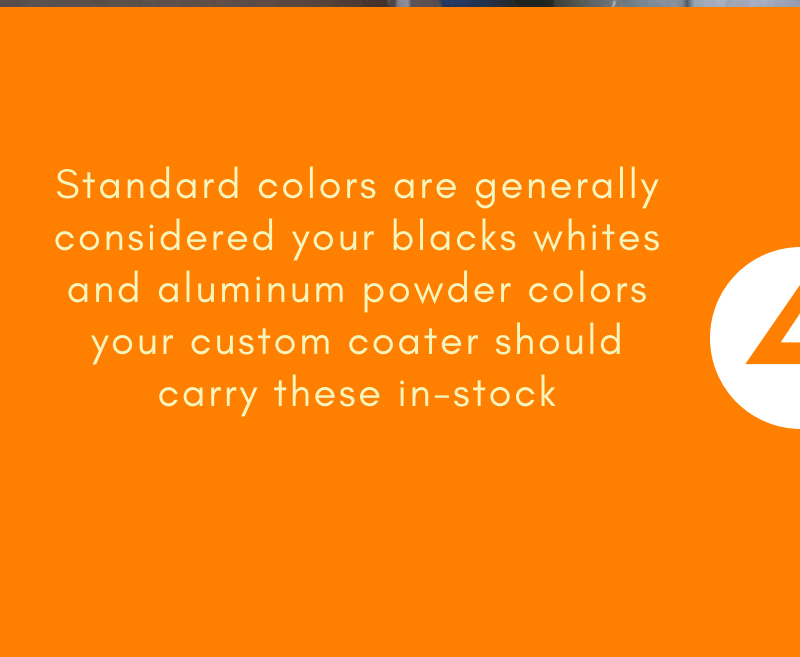

Veins, as they sound, have striations and will appear heavily dimpled with metallic colors like gold copper or silver

2

3

Fluorescent are smooth colors designed for mainly one purpose-safety

Standard colors are generally considered your blacks whites and aluminum powder colors your custom coater should carry these in-stock

4

5

Shimmers are super powderized flecked metallics that are so fine they just shimmer in light they come in a wide range of colors
